Connecting the Disparate: Middleware's Role in Solving Healthcare's EHR Interoperability Problems. By Donald M. Voltz, MD . According to data published on HealthIT.gov, 173 health IT vendors are supplying certified electronic health record (EHR) products to more than 4,500 hospitals. Despite wide penetration of EHRs in hospitals, clinics, and physician offices, a lack of access to patient information between systems continues to plague the US healthcare system.

### Connecting the Disparate: Middleware's Role in Solving ...

To this end, Donald M. Voltz, M.D., department of anesthesiology and medical director of the main operating room at Aultman Hospital in Canton, Ohio, says there is an answer that solves healthcare's interoperability problems that other vertical markets such as retail, banking, and transportation have shown to work—middleware.

### Middleware Monitoring | SL Corp.

Middleware is a key component for managing the flow of information between tag readers and application systems. To quantify the data, RFID systems must first collect it in an application system (software). RFID middleware applies filtering and formatting to data captured by a reader, and provides this processed data to back-end application systems.

### Middleware - an overview | ScienceDirect Topics

A middleware is called by passing two arguments, store dispatch and get state function. The middleware call then returns a function which becomes the input of the next middleware method which may or may not call the next action. In the chain, the final middleware is given the actual dispatch method and the chain ends.
