The earliest use of statistical hypothesis testing is generally credited to the question of whether male and female births are equally likely (null hypothesis), which was addressed in the 1700s by John Arbuthnot (1710), and later by Pierre-Simon Laplace (1770s).. Arbuthnot examined birth records in London for each of the 82 years from 1629 to 1710, and applied the sign test, a simple non ...

The vertical red lines in Figure 1A and 1B indicate one SD to either side of the mean. From this, we can see that the population in Figure 1A has a SD of 20, whereas the population in Figure 1B has a SD of 50. A useful rule of thumb is that roughly 67% of the values within a normally distributed population will reside within one SD to either side of the mean.
